

- ❶ **res-bona® Schimmel-EX**
- ❷ **res-bona® Algen-EX**
- ❸ **res-bona® All-in-1**

❶ **The ultimate mould remover with a treble effect**

- disinfects
- bleaches
- sanitises
-

res-bona® Schimmel-EX automatically removes mould and mildew stains on walls and joints and prevents new growth.

Every 3rd house in Germany has a problem with mildew. This represents a rapidly growing threat to buildings and the health of residents and reduces the comfort of living and protection of the value of the objects.

Moulds:
visually unsightly stains and very dangerous

Poor indoor climate, musty odour, black spots on walls, corners of rooms and furnishings are a clear sign of mould infestation. Most of them are very unhealthy or even dangerous. There are approximately 180,000 different species of mould that constantly surround us. These have been scientifically proven to trigger a whole array of diseases, asthma, allergies, chronic fatigue or even rheumatism.

Buildings containing moulds dramatically increase this impact and thus also increase the risk of illness.

Note: In order to prevent the spreading of mould spores to the air, never pre-treat affected surface areas.

❷ **Long-term algae protection with double effect**
res-bona® Algen-EX, liquid concentrate with a wide spread effect against all types of algae.

Destroys algae and moss, and is also used for

- Swimming-pools,
- Indoor and outdoor pools
- Neutral smell and taste
- Completely safe for the user of the pool
- Non-toxic

It completely inhibits the growth of green algae and other micro-organisms that are responsible for the formation of mucoid substances in the water and eliminates them.

Note: Not suitable for ponds or aquariums with fish. The treated water can safely be used afterwards e.g. to water the lawn.

or for **facades and roofs**.

The formation of moss on surfaces such as facades and roofs will be prevented and the removal becomes effortless.

- For all surfaces
- Paintable
- Works for up to 2 years
- Does not damage metals, painted surfaces, plastics or textiles.

③ The permanent solution for indoor or outdoor use

So far, the disinfecting effect of conventional products only lasts for a short time, whilst the impact of micro-organisms continues. This situation requires a constant effort.

res-bona® All in 1 (Ai1) establishes a long-term biocidal effect on all surfaces and provides effective protection against moss, algae and moulds. This new depository form prevents the further settlement of micro-organisms and ensures that the causes of contamination by micro-organisms are eliminated within minutes and are also destroyed further after that.

The duration of the effect can persist for several years on mechanically non-contaminated areas.

- Manufactured under EN ISO 13485: 2003
- Without alcohol, water-based
- Without dangerous additives
- Simplified cleaning procedures -- clear water is sufficient
- Safe on skin, environmentally friendly, biodegradable

... effective protection against:

- Moulds:
- Mosses
- Algae
- and many micro-organisms

Applications:

Mouldy masonry, caravans, boats, blinds, ...
