

res-bona® ES (Stainless steel)

The "anti-fingerprint-finish"

res-bona® ES provides stainless steel with a dirt-resistant and shiny surface.

For indoors & outdoors

Stainless steel surfaces look good, as long as they are freshly cleaned. Unfortunately, they require a lot of attention and in only a short space of time fingerprints or other contaminants can appear on them making their appearance look dirty. Cleaning them can be quite labour intensive.

It is now easy to clean stainless steel:

By molecular cross-linking, the surface is perfectly protected against aggressive influences. Surfaces stay cleaner for longer and can be cleaned easily at a dramatically lower cost.

- Bacteriostatic
- Dirt-repellent
- High shine
- No special means needed for cleaning
- Safe in food preparation areas
- Easy application

Especially recommended:

For hygienically sensitive areas in nursing homes, hotels, hospitals, ...

Areas where food is stored, prepared or processed.

V2A furniture, stainless steel countertops, cooker hoods, refrigerators, panelling, handrails, fittings.
