

res-bona® GKV

The "long term-finish"

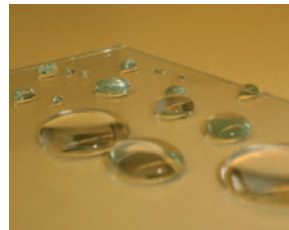

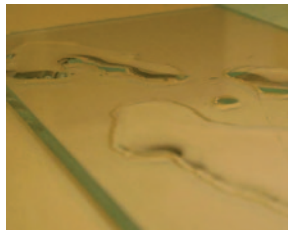

... reduces your time and effort as well as the use of detergents to a minimum.

Ceramics and glass cleaning is tedious and time consuming and is also not always possible with inaccessible areas.

Although commercially available cleaners clean, they do not permanently protect against new contamination. This does not correct the cause, but only the effect.

Surfaces finished with res-bona® GKV (Glass and ceramics finish) stay cleaner for longer and provide a drastic reduction in cleaning time

Due to the special surface structure of nano-processing, glass and ceramic corrosion is prevented. Thus, limescale and dirt can be removed easily without streaking.

Solar panels which have this finish on them even provide permanently higher energy.

- Easy-to-clean
- For indoors & outdoors
- Prevents glass corrosion
- Increased energy yield from solar panels
- Optimum hygiene
- No attachment of germs, bacteria and fungi, thus less unpleasant odours
- Significantly reduced need for cleaning supplies
- Heat stable to 250 degrees Celsius
- Frost-proof

Especially recommended:

For hygienically sensitive areas, such as nursing homes, hotels, hospitals, swimming pools, bathrooms, ...

Glass facades, shop windows, showcases, winter gardens, greenhouses, glass showers, solar panels, glass furniture, mirrors, ...
